ABSTRACT
A clear and well-documented LATEX document is presented as an easy-to-use guide to the process of preparing your work for publication. The "acmart" document class can be used to prepare articles for any ACM publication — conference, journal, or any stage of publication, from review to final "camera-ready" copy, to the author's own version, with very few changes to the source.

CCS CONCEPTS
• Computer systems organization → Embedded systems; Redundancy; Robotics; • Networks → Network reliability.

KEYWORDS
datasets, neural networks, gaze

ACM Reference Format:
Anonymous Author1, Anonymous Author2, Anonymous Author3, Anonymous Author4, Anonymous Author5, Anonymous Author6. 2018. The Name of the Title is Hope. ACM, New York, NY, USA, 5 pages. https://doi.org/XXXXXXX.XXXXXXX

1 INTRODUCTION
ACM's consolidated article template, introduced in 2017, provides a consistent LATEX style for use across ACM publications, and incorporates accessibility and metadata-extraction functionality necessary for future Digital Library endeavors. Numerous ACM and SIG-specific LATEX templates have been examined, and their unique features incorporated into this single new template.

If you are new to publishing with ACM, this document is a valuable guide to the process of preparing your work for publication. If you have published with ACM before, this document provides insight and instruction into more recent changes to the article template.

2 TEMPLATE OVERVIEW
As noted in the introduction, the "acmart" document class can be used to prepare many different kinds of documentation — a double-blind initial submission of a full-length technical paper, a two-page SIGGRAPH Emerging Technologies abstract, a "camera-ready" journal article, a SIGCHI Extended Abstract, and more — all by selecting the appropriate template style and template parameters.

This document will explain the major features of the document class. For further information, the LATEX User's Guide is available from https://www.acm.org/publications/proceedings-template.

2.1 Template Styles
The primary parameter given to the "acmart" document class is the template style which corresponds to the kind of publication or SIG publishing the work. This parameter is enclosed in square brackets after the \documentclass command:
\documentclass[STYLE]{acmart}

Journals use one of three template styles. All but three ACM journals use the acmsmall template style:
• acmsmall: The default journal template style.
• acmlarge: Used by JOCCH and TAP.
• acmtog: Used by TOG.

The majority of conference proceedings documentation will use the acmconf template style:
• acmconf: The default proceedings template style.
• sigchi: Used for SIGCHI conference articles.
• sigchi-a: Used for SIGCHI "Extended Abstract" articles.
• sigplan: Used for SIGPLAN conference articles.

2.2 Template Parameters
In addition to specifying the template style to be used in formatting your work, there are a number of template parameters which modify...
some part of the applied template style. A complete list of these parameters can be found in the \TeX\ User’s Guide.

Frequently-used parameters, or combinations of parameters, include:

- \texttt{\textbackslash anonymou\textbackslash review}: Suitable for a "double-blind" conference submission. Anonymizes the work and includes line numbers. Use with the \texttt{\textbackslash acmSubmissionID} command to print the submission’s unique ID on each page of the work.
- \texttt{\textbackslash authorversion}: Produces a version of the work suitable for posting by the author.
- \texttt{\textbackslash screen}: Produces colored hyperlinks.

This document uses the following string as the first command in the source file:
\documentclass[sigconf,authordraft]{acmart}

3 MODIFICATIONS

Modifying the template — including but not limited to: adjusting margins, typeface sizes, line spacing, paragraph and list definitions, and the use of the \texttt{\textbackslash vspace} command to manually adjust the vertical spacing between elements of your work — is not allowed.

Your document will be returned to you for revision if modifications are discovered.

4 TYPEFACES

The "\texttt{acmart}" document class requires the use of the "Libertine" typeface family. Your \TeX\ installation should include this set of packages. Please do not substitute other typefaces. The "\texttt{lmodern}" and "\texttt{ltimes}" packages should not be used, as they will override the built-in typeface families.

5 TITLE INFORMATION

The title of your work should use capital letters appropriately — https://capitalizemytitle.com/ has useful rules for capitalization.

Use the title command to define the title of your work. If your work has a subtitle, define it with the \texttt{\textbackslash subtitle} command. Do not insert line breaks in your title.

If your title is lengthy, you must define a short version to be used in the page headers; to prevent overlapping text. The title command has a "short title" parameter:
\texttt{\textbackslash title[short title](full title)}

6 AUTHORS AND AFFILIATIONS

Each author must be defined separately for accurate metadata identification. Multiple authors may share one affiliation. Authors’ names should not be abbreviated; use full first names wherever possible. Include authors’ e-mail addresses whenever possible.

Grouping authors’ names or e-mail addresses, or providing an "e-mail alias," as shown below, is not acceptable:
\texttt{\author{Brooke Aster, David Mehldau}}
\texttt{\email{dave,judy,steve@university.edu}}
\texttt{\email{firstname.lastname@phillips.org}}

The \texttt{\textbackslash authornote} and \texttt{\textbackslash authornotemark} commands allow a note to apply to multiple authors — for example, if the first two authors of an article contributed equally to the work.

If your author list is lengthy, you must define a shortened version of the list of authors to be used in the page headers, to prevent overlapping text. The following command should be placed just after the last \texttt{\textbackslash author()} definition:
\texttt{\renewcommand{\shortauthors}{McCartney, et al.}}

Omitting this command will force the use of a concatenated list of all of the authors’ names, which may result in overlapping text in the page headers.

The article template’s documentation, available at https://www.acm.org/publications/proceedings-template, has a complete explanation of these commands and tips for their effective use.

Note that authors’ addresses are mandatory for journal articles.

7 RIGHTS INFORMATION

Authors of any work published by ACM will need to complete a rights form. Depending on the kind of work, and the rights management choice made by the author, this may be copyright transfer, permission, license, or an OA (open access) agreement.

Regardless of the rights management choice, the author will receive a copy of the completed rights form once it has been submitted. This form contains \TeX\ commands that must be copied into the source document. When the document source is compiled, these commands and their parameters add formatted text to several areas of the final document:

- the "ACM Reference Format" text on the first page.
- the "rights management" text on the first page.
- the conference information in the page header(s).

Rights information is unique to the work; if you are preparing several works for an event, make sure to use the correct set of commands with each of the works.

The ACM Reference Format text is required for all articles over one page in length, and is optional for one-page articles (abstracts).

8 CCS CONCEPTS AND USER-DEFINED KEYWORDS

Two elements of the "\texttt{acmart}" document class provide powerful taxonomic tools for you to help readers find your work in an online search.

The ACM Computing Classification System — https://www.acm.org/publications/class-2012 — is a set of classifiers and concepts that describe the computing discipline. Authors can select entries from this classification system, via https://dl.acm.org/ccs/ccs.cfm, and generate the commands to be included in the \TeX\ source.

User-defined keywords are a comma-separated list of words and phrases of the authors’ choosing, providing a more flexible way of describing the research being presented.

CCS concepts and user-defined keywords are required for for all articles over two pages in length, and are optional for one- and two-page articles (or abstracts).

9 SECTIONING COMMANDS

Your work should use standard \TeX\ sectioning commands: section, subsection, subsubsection, and paragraph. They should be numbered; do not remove the numbering from the commands.
Table 1: Frequency of Special Characters

<table>
<thead>
<tr>
<th>Non-English or Math</th>
<th>Frequency</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ø</td>
<td>1 in 1,000</td>
<td>For Swedish names</td>
</tr>
<tr>
<td>π</td>
<td>1 in 5</td>
<td>Common in math</td>
</tr>
<tr>
<td>$</td>
<td>4 in 5</td>
<td>Used in business</td>
</tr>
<tr>
<td>Ψ, Ω</td>
<td>1 in 40,000</td>
<td>Unexplained usage</td>
</tr>
</tbody>
</table>

12.1 The “Teaser Figure”

A “teaser figure” is an image, or set of images in one figure, that are placed after all author and affiliation information, and before the body of the article, spanning the page. If you wish to have such a figure in your article, place the command immediately before the \maketitle command:

\begin{teaserfigure}

\caption{figure caption}

\includegraphics[width=\textwidth]{sampleteaser}

\end{teaserfigure}

13 CITATIONS AND BIBLIOGRAPHIES

The use of \LaTeX for the preparation and formatting of one’s references is strongly recommended. Authors’ names should be complete — use full first names ("Donald E. Knuth") not initials ("D. E. Knuth") — and the salient identifying features of a reference should be included: title, year, volume, number, pages, article DOI, etc.

The bibliography is included in your source document with these two commands, placed just before the \end{document} command:

\bibliography{bibfile}

where “bibfile” is the name, without the “.bib” suffix, of the \LaTeX file.

Citations and references are numbered by default. A small number of ACM publications have citations and references formatted in the “author year” style; for these exceptions, please include this command in the \preamble (before the command \begin{document}) of your \LaTeX source:

\citetitle{acmauthoryear}

Some examples. A paginated journal article [2], an enumerated journal article [9], a reference to an entire issue [8], a monograph (whole book) [21], a monograph/whole book in a series (see 2a in spec. document) [15], a divisible-book such as an anthology or compilation [10] followed by the same example, however we only output the series if the volume number is given [11] (so Editor00a's series should NOT be present since it has no vol no.), a chapter in a divisible book [33], a chapter in a divisible book in a series, a multi-volume work as book [20], a couple of articles in a proceedings (of a conference, symposium, workshop for example) (paginated proceedings article) [13], a proceedings article with all possible elements [32], an example of an enumerated proceedings article [12], an informally published work [14], a couple of preprints [5, 6], a doctoral dissertation [7], a master’s thesis: [3], an online document / world wide web resource [1, 26, 34], a video game (Case 1) [25] and (Case 2) [24] and [23] and (Case 3) a patent [31], work accepted for publication [28], ’YYYYb’-test for prolific author [29] and [30]. Other cites might contain ‘duplicate’ DOI and URLs (some SIAM articles) [19]. Boris / Barbara Beeton: multi-volume works as books [17] and [16]. A couple of citations with DOIs: [18, 19]. Online citations: [34–36]. Artifacts: [27] and [4].

14 MULTI-LANGUAGE PAPERS

Papers may be written in languages other than English or include titles, subtitles, keywords and abstracts in different languages (as a rule, a paper in a language other than English should include an English title and an English abstract). Use \language= ... for every language used in the paper. The last language indicated is the main language of the paper. For example, a French paper with additional titles and abstracts in English and German may start with the following command:

\documentclass[acmart]

\begin{document}

\title{The title}

\subtitle{subtitle}

\keywords{keywords}

\abstract{abstract}

\begin{teaserfigure}

\caption{figure description}

\end{teaserfigure}

\end{document}

The title, subtitle, keywords and abstract will be typeset in the main language of the paper. The commands \translatedabstract are used to set the translation of the abstract. These commands and environment have a mandatory first argument: the language of the second argument. See sample-sigconf-i13n.tex for examples of their usage.

15 SIGCHI EXTENDED ABSTRACTS

The “sigchi-a” template style (available only in \LaTeX and not in word) produces a landscape-orientation formatted article, with a wide left margin. Three environments are available for use with...
To Robert, for the bagels and explaining CMYK and color spaces.
